

Mining

Geoplanning mining

We are a solid, innovative, flexible, reliable and experienced company **dating back to 2001**.

Our mining department is staffed by personnel with more than 20 years of experience in the sector. Experience and knowledge that we make available to our customers.

Additionally, we bring excitement and enthusiasm to every project that we participate in. Our **number 1 goal** is to **satisfy our customers** and **to win their confidence**.

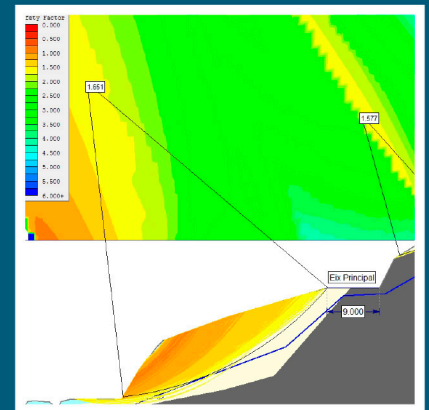

Our Services

Drilling with Wire-Line system

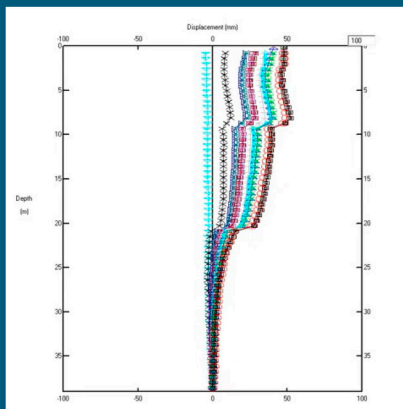

Drilling with Sonic Drilling system

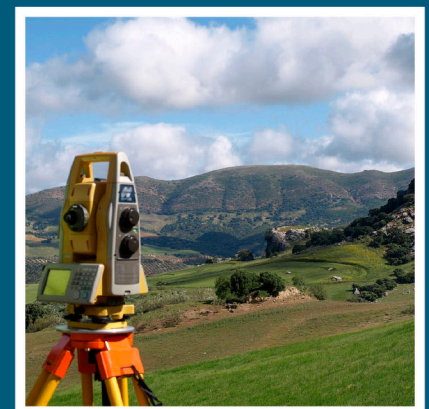

Geological and geotechnical studies

Testing laboratory

Geotechnical instrumentation

Topography

Corporate Philosophy

Optimising costs for our clients

- Deep core drilling with PQ, HQ and NQ bit sizes at **competitive prices**.
- **Sonic technology** drilling.
- A **wide range of services** available to our customers.

Our working strategy

- Proven **experience** in the sector.
- Monitoring and supervision by **qualified technicians** with over **20 years of experience**.
- An extensive and modern **machine pool**.
- Innovative **Sonic technology** since the year 2016.
- Geotechnical **laboratory**.
- We strive for **innovation** and believe in **lifelong learning**.

Proof of experience

- **Extensive client portfolio** which includes some of the most important companies in Spain.
- Participating in **significant projects**.
- Experience in **international projects**.
- **Extensive technical workforce** highly qualified in geology and geological engineering.
- Quality certification **ISO 17025** and **L-0600026**.

Our commitment

- 100% to the **safety** of our workers and other project participants.
- 100% to the natural surroundings in which we work, **with the greatest respect for the environment**.
- 100% with the **requirements and requests** of our customers.
- Finally, we make a 100% commitment to a **responsible and sustainable mining**.

Sonic Drilling,

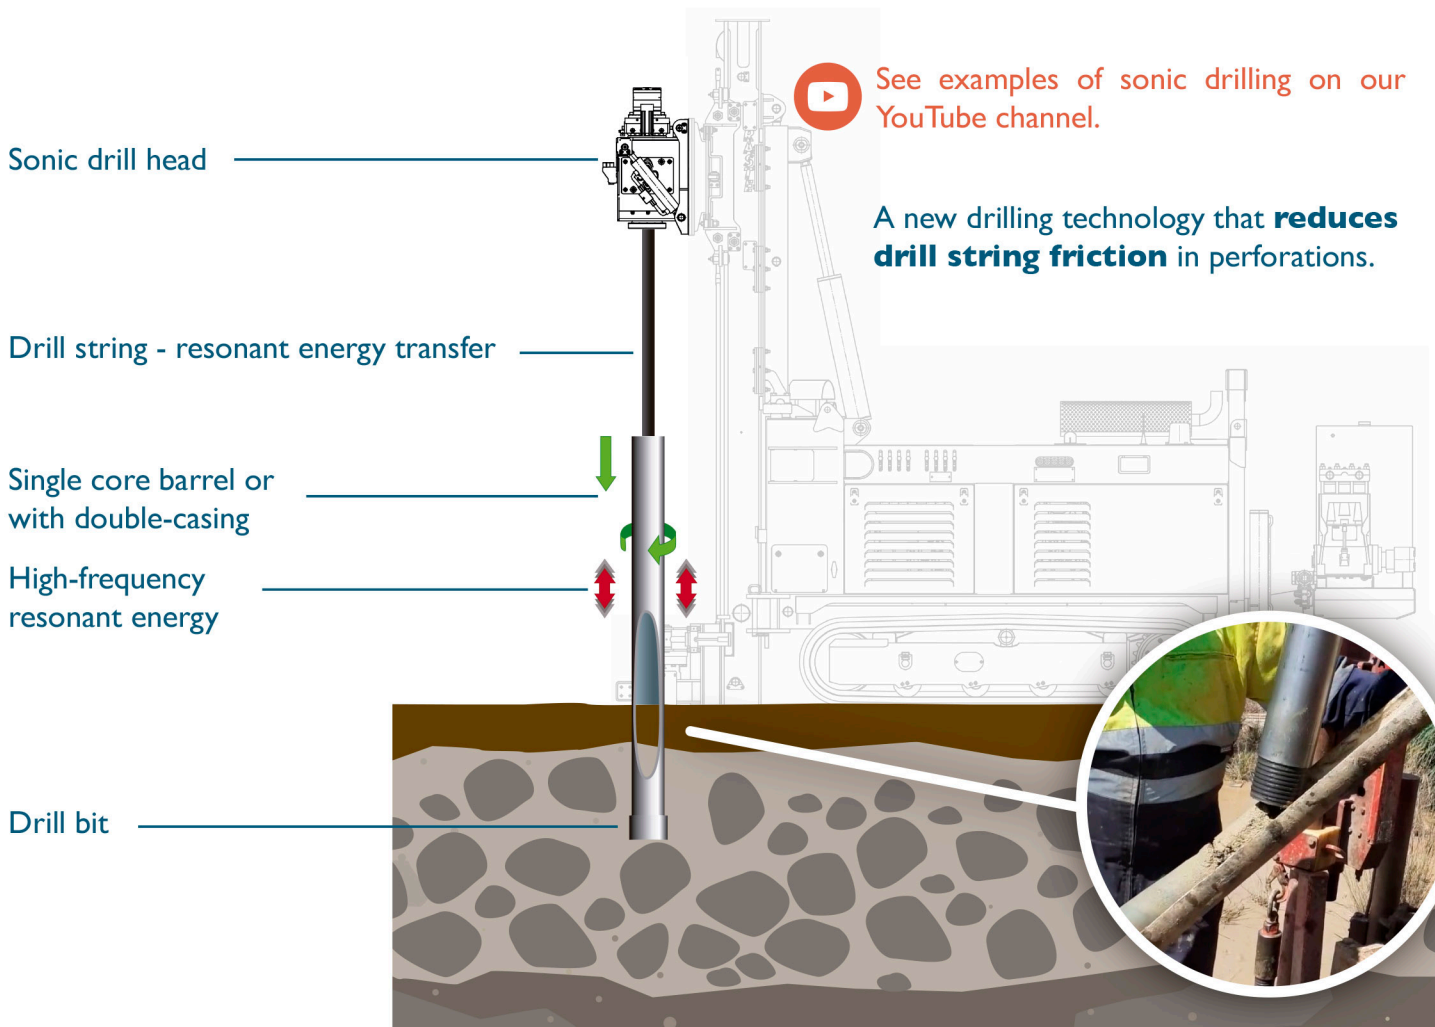

a new concept of perforation

What does sonic drilling bring to mining?

- An **innovative** concept and a breakthrough in the world of drilling.
- **100% core retrieval** in all terrain types with minimal alterations.
- High **drilling capacity in all types of soil** or complex terrains such as gravel or cobbles.
- A revolution in the retrieval of contaminated soil samples by using Sonic Drilling which permits **extraction without water usage**.
- Ensures the **verticality of the drilling** with a maximum deviation of 1° with regard to the lower axis.
- **Avoids the dispersal of** soluble contaminants.
- Drill capacity up to **50 metres**.

How does it work?

- The sonic vibration **reduces soil friction** which helps to advance the core barrel.
- High performance with **fast penetration speeds**.
- Obtains **high-quality samples** in dry and saturated soils.
